

Recent Advances in Computer Poker and Future Research for Artificial Intelligence in Video Games

Richard Gibson

SIAT Faculty Search Presentation
February 28, 2013

compute + calcul
CANADA

One Slide Summary

- 2009 – 2013: Computer Poker Research

One Slide Summary

- 2009 – 2013: Computer Poker Research
- Future: AI in Video Games

Image source: arcadelearningenvironment.org

Outline of Presentation

- Computer Poker Primer
 - Motivation
 - Background
- New Contributions to Computer Poker
 - Research + Hyperborean3p
- Future Research – AI in Video Games
 - StarCraft AI, ALE, automated content generation
- Teaching Interests
 - Game design, AI in video games

Outline of Presentation

- **Computer Poker Primer**
 - **Motivation**
 - Background
- **New Contributions to Computer Poker**
 - Research + Hyperborean3p
- **Future Research – AI in Video Games**
 - StarCraft AI, ALE, automated content generation
- **Teaching Interests**
 - Game design, AI in video games

Why Poker Research?

- Classic games, such as chess and checkers, are:
 - Deterministic
 - Binary outcomes (+ draw)
 - Perfect Information

Image source: spectrum.ieee.org

Image sources: Wikipedia

Why Poker Research?

- However, poker is a game with:
 - Stochastic elements

Flop?

Flop?

Flop?

Image sources: Wikipedia

Why Poker Research?

- However, poker is a game with:
 - Stochastic elements
 - Varying outcomes

Image source: ebaumsworld.com

Why Poker Research?

- However, poker is a game with:
 - Stochastic elements
 - Varying outcomes
 - Imperfect information

Why Poker Research?

- Poker research is applicable in other areas:
 - Airport security [Pita *et al.*, AI Magazine 2009]
 - Adaptive treatment strategies [Chen and Bowling, NIPS 2012]
 - Sequential auctions [?]

Outline of Presentation

- **Computer Poker Primer**
 - Motivation
 - **Background**
- New Contributions to Computer Poker
 - Research + Hyperborean3p
- Future Research – AI in Video Games
 - StarCraft AI, ALE, automated content generation
- Teaching Interests
 - Game design, AI in video games

Poker Research Background

- Model poker as an **extensive-form game**:

Poker Research Background

- Information sets:** Sets of states a player cannot distinguish between.

Poker Research Background

- Example: **Kuhn Poker**

Poker Research Background

- Example: **Kuhn Poker**

Poker Research Background

- Example: **Kuhn Poker**

Poker Research Background

- Example: **Kuhn Poker**

Bet!

Fold?
Call?

Poker Research Background

- Example: **Kuhn Poker**

Call.

Poker Research Background

- Example: **Kuhn Poker**

Poker Research Background

- Example: **Kuhn Poker**

-2

Lose.

+2

Win!

Poker Research Background

- Example: **Kuhn Poker**

Poker Research Background

Poker Research Background

- A **strategy profile** maps each information set to probability a distribution over actions.

Poker Research Background

- What type of strategy profile do we want?
 - Nash equilibrium
- Example: Rock-Paper-Scissors

Poker Research Background

Poker Research Background

- A Nash equilibrium strategy profile for Rock-Paper-Scissors.
 - “No one can change their strategy and do better.”

Poker Research Background

- A Nash equilibrium in a 2-player game is a **defensive** strategy:
 - “I can't lose no matter what my opponent does.”

Poker Research Background

Poker Research Background

- Use minimax (alpha-beta) search to compute Nash?

Source: clker.com

Poker Research Background

- Use minimax (alpha-beta) search to compute Nash?

Poker Research Background

- Instead, use **Counterfactual Regret Minimization (CFR)** [Zinkevich *et al.*, NIPS 2007].

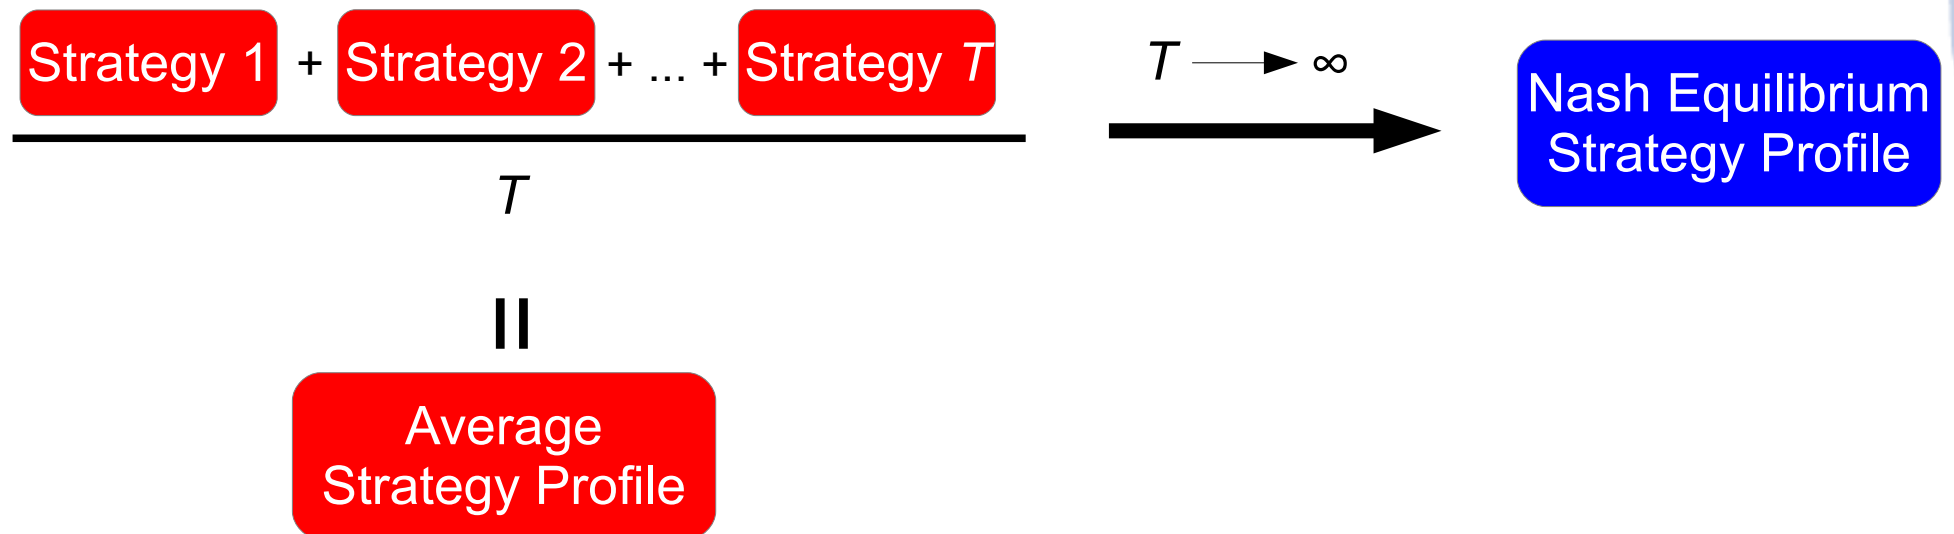

Poker Research Background

- Instead, use **Counterfactual Regret Minimization (CFR)** [Zinkevich *et al.*, NIPS 2007].

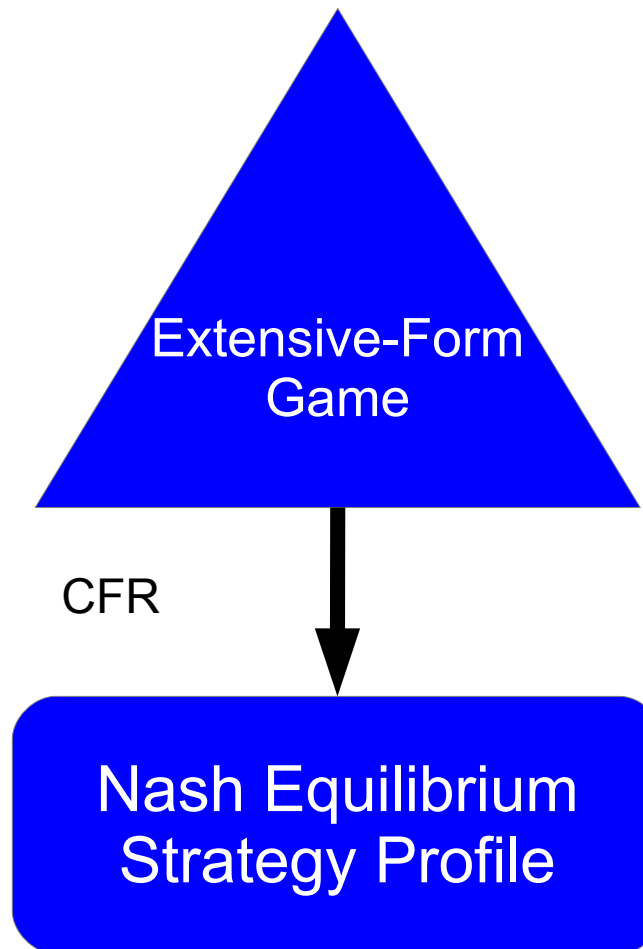

Poker Research Background

- Instead, use **Counterfactual Regret Minimization (CFR)**
[Zinkevich *et al.*, NIPS 2007].

Poker Research Background

Poker Research Background

- Huge problem (no pun intended):

Poker Research Background

?

Nash Equilibrium
Strategy Profile

Hyperborean3p Tournament

2-player Experts

Poker Competition Results

- 3-player Hold'em 2010 – 2012:

5

1

- Over all competitions:
(34/35 top-3 finishes)

21

8

5

Outline of Presentation

- Computer Poker Primer
 - Motivation
 - Background
- New Contributions to Computer Poker
 - Research + Hyperborean3p
- **Future Research – AI in Video Games**
 - **StarCraft AI, ALE, automated content generation**
- Teaching Interests
 - Game design, AI in video games

StarCraft AI

- Real-time strategy game with
 - Imperfect information
 - Large state space
 - Actions taken in real-time
- Better AI can help game design
 - Improved single player experience
 - Game balance

StarCraft AI Competitions

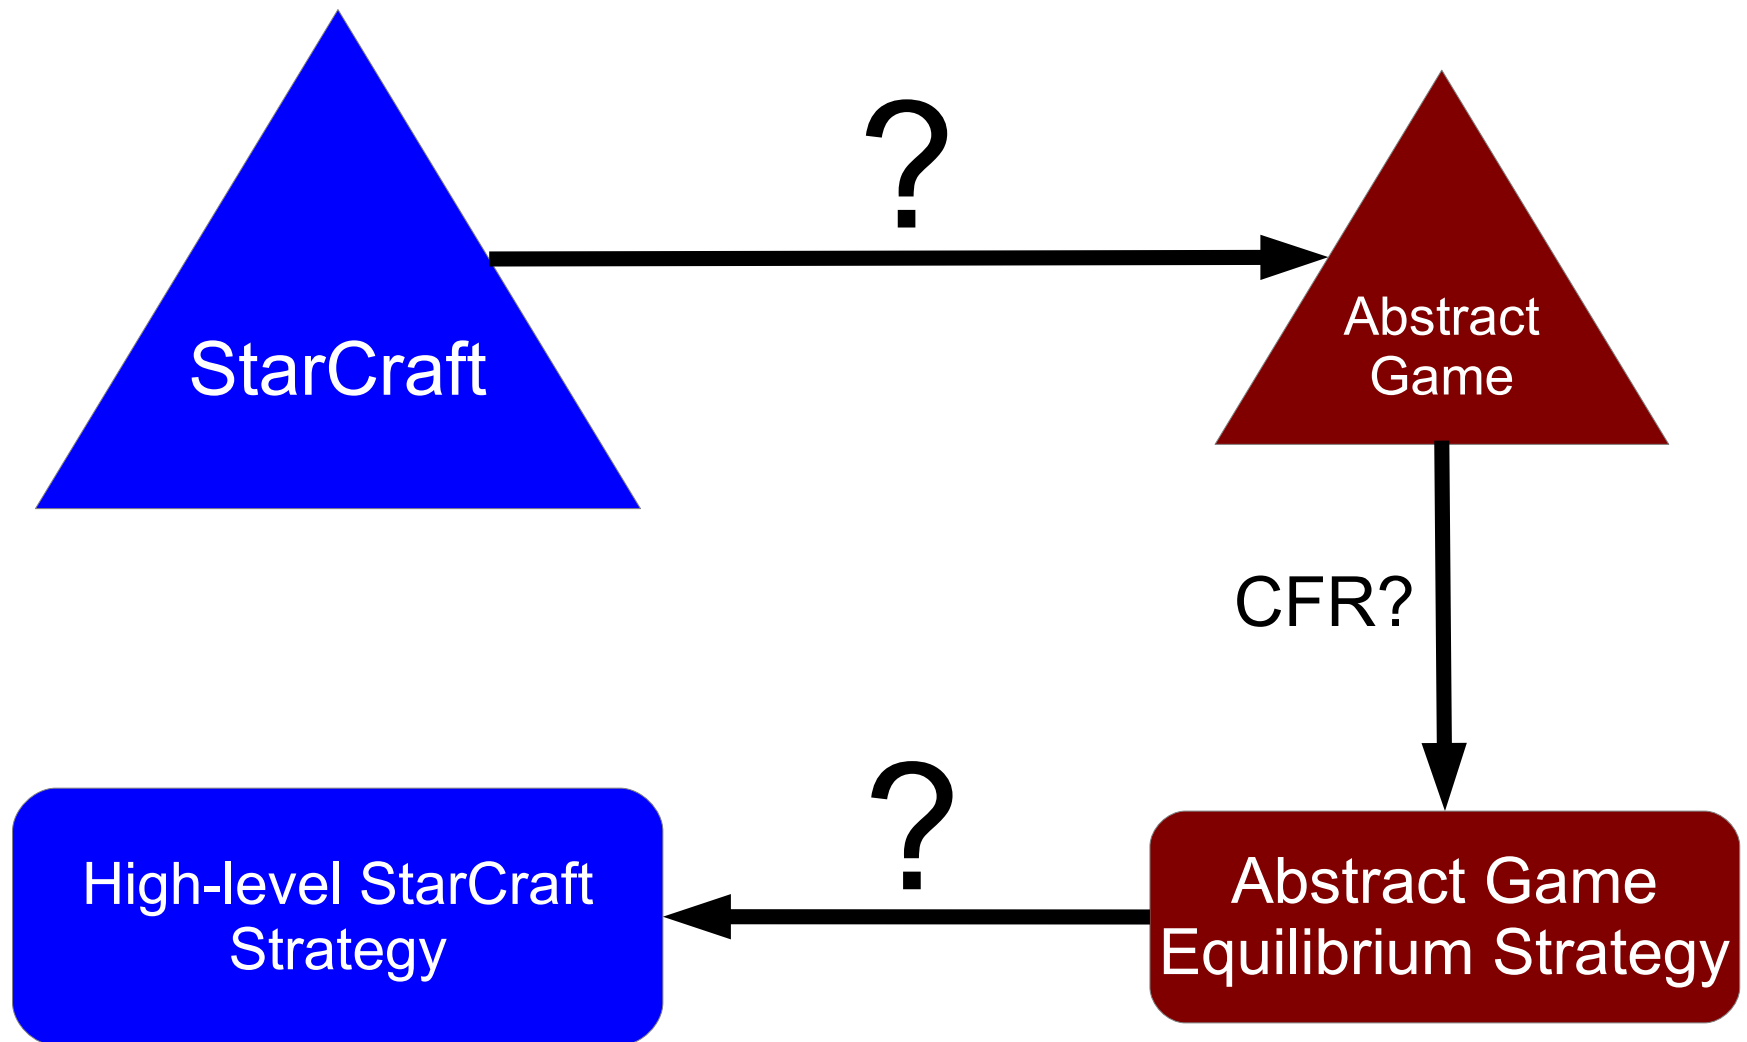

- Annual StarCraft AI Competition at AIIDE
 - Winner plays human professional
 - AI currently no match for humans
 - Poor high-level strategies

Image source: Flickr

StarCraft AI Research

Arcade Learning Environment (ALE)

- Framework for developing AI agents for Atari 2600 games
 - Simple, yet still challenging domains
- Goal: One agent that plays many games well
 - At the heart of artificial intelligence
- Can aid game design
 - Auto-detect glitches
 - Evaluate difficulty
- Future research ideas:
 - Death detection in reinforcement learning

Automated Game Content Generation

Image source: *Infinite Mario Bros.* screenshot

	1	2	3	4	5	6
		19h30		19h00		19h00
7	8	9	10	11	12	13
		19h30		19h00		19h00
14	15	16	17	18	19	20
		19h00		19h00		19h00
21	22	23	24	25	26	27
19h00						19h00
28	29	30	31			
	19h30	19h30				

Image source: nhl.com

- Procedural methods for creating:
 - Levels for a platforming game
 - Music for different game contexts
 - League schedules in a sports game, etc.
- Benefits:
 - More content for “free”
 - Content tailor-made for individual players
- Techniques:
 - Constraint satisfaction + optimization
 - I want to learn more!

Outline of Presentation

- Computer Poker Primer
 - Motivation
 - Background
- New Contributions to Computer Poker
 - Research + Hyperborean3p
- Future Research – AI in Video Games
 - StarCraft AI, ALE, automated content generation
- **Teaching Interests**
 - **Game design, AI in video games**

Teaching Interests

- Games design / programming courses
 - IAT 167, 265, 312, 410
 - Experience as lab instructor for introductory programming course
- Establish new courses in AI and games...

AI in Games Courses

- Introductory course
 - Hands-on experience implementing real AI
 - NPC behaviour, simple sports AI, etc.
- Advanced / graduate course
 - Exposure to research in the field:
 - Pathfinding
 - StarCraft AI
 - Interactive story-telling...

Image source: [amazon.ca](https://www.amazon.ca)

Conclusion

- Computer poker research
 - Primary author of Hyperborean3p
 - Success in poker competitions
- Video game research in StarCraft, ALE, automated game content generation
- Interested in teaching game design and AI in games

Thanks for Listening!

- I'm really excited to be here!
